EDUCATION

University of Mississippi

Bachelor of Arts in Computer Science, Minor in General Business

Oxford, MS

Aug 2022 - May 2026

EXPERIENCE

Software Engineer Intern

June 2026 - Sept 2026

Ironflow AI

Solana Beach, CA

- Shipped full-stack features for a multi-tenant manufacturing ERP using React 19, Next.js, TypeScript, Python, FastAPI, GraphQL, PostgreSQL, and Docker, owning delivery from ticket and review through QA and staged rollout.
- Cut AI answer-formatting delay from roughly 9 seconds to zero with a 50 ms SSE buffer, memoized React rendering, and an adaptive typewriter reveal.
- Built an AI clarifying-question flow with Anthropic API and Strands Agents, SSE events, and a React UI supporting single-select, multi-select, free-text, and skip responses; covered states in Storybook and gated release with a feature flag.
- Delivered a multi-level bill-of-materials view from database to API to UI, modeling components as a graph so shared subassemblies render correctly under multiple parents.
- Identified and fixed a query that silently truncated wide bill-of-materials levels; added frontend and backend regression tests to prevent recurrence.
- Added colorblind-accessible themes using the Okabe-Ito palette, remapping color tokens that convey meaning.
- Built self-service API token creation and revocation with identity derived from authentication context, hashed storage, and one-time secret display.
- Wrote Jest, React Testing Library, and pytest coverage; reviewed teammate pull requests and improved CI reliability.

PROJECTS

PC Audit | PowerShell, TypeScript, Windows Diagnostics

[Live demo](#) | 2026

- Built a read-only Windows diagnostic tool using PowerShell and TypeScript to analyze display settings, boot performance, startup services, and memory pressure.
- Created browser and command-line reports that distinguish measured findings from unavailable data, with personal-data redaction and automated collector and browser tests.

FantasyStats | TypeScript, Monte Carlo, WebGL, Cloudflare

[Live demo](#) | 2026

- Backtested four seasons and found a trained model did not outperform a season-average baseline; presented simulated player distributions, big-week probabilities, and overlapping outcomes as ties.
- Built Monte Carlo simulations with volatility based on position and mean performance, a walk-forward backtest with type-enforced leakage prevention, and a published prediction scorecard.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, Go, Bash

Frontend: React 19, Next.js, Apollo Client, GraphQL, Tailwind CSS, Jest, React Testing Library, Storybook, WebGL, responsive UI, WCAG accessibility

Backend: FastAPI, Strawberry GraphQL, REST, SQLAlchemy, Alembic, PostgreSQL, MySQL, Pydantic, pytest, Cloudflare Workers, WebSockets

AI: AI agents, LLMs, generative AI, Anthropic API, Strands Agents, MCP, Gemini API, prompt engineering, SSE

Tools & Practices: Git, GitHub Actions, CI/CD, code review, unit and integration testing, Docker, LaunchDarkly, Agile

LEADERSHIP AND HONORS

- President, Upsilon Pi Epsilon Honor Society (Aug 2025 - May 2026): led the Ole Miss chapter and managed member induction.
- HackBeta 2024: 1st Place Overall and 1st in Challenge Category for a cross-platform Java file-transfer system. HackBeta 2025: 2nd Place.
